

AMENDED CLAIMS

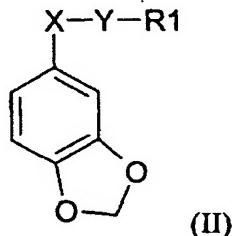

received by the International Bureau on
17 December 2003 (12.17.2003) original claims 1-8
replaced by amended claims 1-8; 3 pages

5

1. The use of a vanilloid corresponding to either one of the following general formulae:

(I) and

(II)

10

wherein

X represents a linear, saturated, monounsaturated or polyunsaturated, and substituted or unsubstituted C₁-C₄ alkyl group;

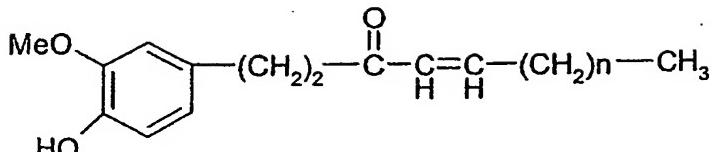

Y is chosen from the groups -C(O)N-, and -C(O)-;

R1 represents a linear, branched or cyclic chain, saturated, monounsaturated or polyunsaturated, and substituted or unsubstituted C₂-C₂₄ alkyl group; for the manufacture of a medicament intended to reduce, suppress or prevent snoring.

25 2. The use as claimed in claim 1, characterized in that the vanilloid is chosen from the group consisting of piperine, gingerols and shogaols, advantageously this includes one or more shogaols.

30 3. The use as claimed in claim 2, characterized in that the shogaol(s) correspond(s) to the general

formula (III):

(III)

in which n is equal to 1, 2, 4, 6 or 8, advantageously
5 1.

4. The use as claimed in either of claims 2 and 3,
characterized in that the shogaol(s) are in the form of
10 a crude extract of a plant of the Zingiberaceae family,
advantageously obtained by a process which comprises
the following step:

a) preparation of the crude extract from fresh
or dried rhizomes of said plant, by
maceration of a ground product of these
15 rhizomes at a temperature of between 10 and
35°C, followed by one or more extractions of
this ground product under reflux, or by
subjecting a ground product of said rhizomes
to percolation at a temperature of between 10
20 and 35°C, each of these operations
(maceration, extractions under reflux and
percolation) being carried out by means of an
organic solvent or of a mixture of
appropriate organic solvents.

25
5. The use as claimed in either of claims 2 and 3,
characterized in that the shogaol(s) is in the form of
a purified extract of a plant of the Zingiberaceae
family, advantageously obtained by a process which
30 comprises step a) as described in claim 3 and the
following additional steps:

b) purification of the crude extract obtained in
step a) by subjecting said extract, after

removal of the solvent(s) which it contains
and its taking up in water, to one or more
countercurrent extractions by means of
organic solvent or of a mixture of organic
solvents immiscible with water, and if
desired,

5

c) chromatographic separation of the shogaols.

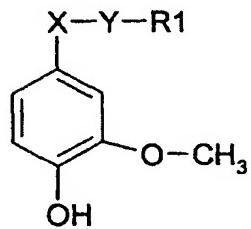

6. The use as claimed in either of claims 4 and 5,
10 characterized in that the plant of the Zingiberaceae
family is chosen from the species *Alpinia galanga*,
Alpinia officinarum, *Zingiber officinalis*, *Zingiber cassumunar* and *Zingiber zerumbet*, more advantageously
still this includes *Alpinia galanga*.

15

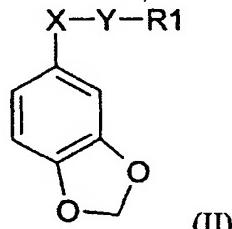

7. The use as claimed in any one of the preceding
claims, characterized in that the vanilloid is
formulated for oral administration or in the form of a
nasal or mouth spray.

20

8. The use of a vanilloid corresponding to either one
of the following general formulae:

(I) and

(II)

25

wherein

X represents a linear, saturated, monounsaturated or
polyunsaturated, and substituted or unsubstituted
 $\text{C}_1\text{-C}_4$ alkyl group;

30

Y is chosen from the groups $-\text{C}(\text{O})\text{N}-$, and $-\text{C}(\text{O})-$;

R1 represents a linear, branched or cyclic chain,
saturated, monounsaturated or polyunsaturated, and
substituted or unsubstituted $\text{C}_2\text{-C}_{24}$ alkyl group;

for the manufacture of a medicament intended for treating sleep apnea.
